

My family recently subscribed to satellite radio, and appreciate the freedom to use this technology. It is our preferred way to listen to the radio now, and we do not want our government to prevent this technology from providing traditional radio services such as local traffic and weather reports. We pay for satellite radio, and find any attempt to censor what it can transmitt to be against the principles on which this country was founded. Our family urges the FCC to reject the NAB's petition 04-160 as an un-American attempt to limit our freedom.
